AIRFOIL SHAPE FOR A TURBINE BUCKET

ABSTRACT OF THE DISCLOSURE

First stage turbine buckets have airfoil profiles the for substantially in accordance with Cartesian coordinate values of X, Y and Z set forth Table I wherein X and Y values are in inches and the Z values are non-dimensional. A contract the contract of the cont values from 0.05 span to 0.95 span convertible to Z distances in inches by multiplying the Z values by the state of the st height of the airfoil in inches. The X and Y values are distances which, when connected by smooth continuing the state of the arcs, define airfoil profile sections at each distance Z. The profile sections at each distance Z are joined of the way with smoothly to one another to form a complete airfoil shape. A ANALLY O The X, Y and Z distances may be scalable as a function of the same constant or number to provide a scaled up or , and scaled down airfoil section for the bucket. The nominal airfoil given by the X, Y and Z distances lies within an ... envelop of ± 0.150 inches in directions normal to the surface of the airfoil.
